

STAINLESS STEEL BLIND FLANGES

Stainless Steel Blind Flanges are used to close pipe ends or nozzles in piping systems. Ideal for inspection, maintenance, or future connections, they provide a leak-proof seal. Manufactured in SS 304, 304L, 316, 316L grades, these flanges comply with ANSI, ASME B16.5, DIN, and EN standards. Sizes range from ½" to 48" with pressure classes from 150# to 2500#. They are commonly used in petrochemical, food processing, and pharmaceutical industries for high corrosion resistance and durability.
