

STAINLESS STEEL CHECK VALVES

Stainless Steel Check Valves allow one-way flow, automatically preventing backflow in piping systems. Available in swing, lift, and wafer types, they're ideal for water, steam, and chemical applications. Constructed from SS 304, 316, and Duplex grades, these valves range from ½" to 12" in size, with pressure classes 150# to 900#. They meet ASME B16.34, API 6D, and DIN standards. Used in oil refineries, water treatment plants, and HVAC systems for corrosion resistance and long service life.
