

STAINLESS STEEL REDUCING TEE

Reducing Tees allow connection of three pipes with different diameters, ideal for branch lines in fluid transport systems. Fabricated in SS 304, 316 and other alloys with sizes ranging from ½" to 24" x ½"-12" (run x branch) schedules from SCH 10 to XXS. Manufactured to ASME B16.9 and MSS-SP-75 standards. Used in chemical, petroleum and water processing lines to redirect flow with corrosion-resistant and pressure-capable connections.
